

## Abstract

### ~~Suspension system and product holder for products~~

- 5           A suspension system for products comprises a base (1) for fixing to a wall of a space, provided with at least one product holder (10). On a first side the product holder is connected displaceably to the base (1) and on a second side comprises a suspension member (14,15) which is able to receive a product. The base comprises at least two mutually telescopic profiles (2,3), wherein on the first side the product holder is connected to at least
- 10   one of the profiles not only displaceably but also for rotation on a longitudinal axis (L).
